

2 - Kiln Formed/Slumped Glasses

Glasslite specialises in kiln formed/slumped lighting glasses.

This is achieved by having an extensive knowledge in kiln construction, temperature control, glass moulds and glass processing techniques. This combination proves to be very versatile and provides the following benefits:

- **Wide range of glasses** are produced for architectural light fittings: ceiling - downlights - pendants - table lamps - wall.
- **Standard shapes to custom designs.**
- **Affordable development and set up costs.** Moulds are designed and manufactured inhouse.
- **Prototype/sample services.**
- **Flexibility:** small batch quantities to large volumes, accommodate design changes, materials and finishes.
- **Process can be applied to different glass types:** Opalika™ - Coloured - Float - Textured/ Ribbed - Borosilicate.
- **Textured patterns** can be introduced to clear float glass. When light is introduced, the cast glass takes on a whole new dimension.
- **Realistic stock holdings and order lead times.**

- **Replacement Glasses:** available for all products.
- **Machined standard and special support components.**
