

## 8 - Coloured Glass

Glasslite's coloured glass range is used in a wide range of architectural light fittings: Downlights - Pendants - Table Lamps - Wall Lights.

Special atmospheres and effects can be achieved with coloured glass, opening up a whole range of possibilities for designers to give buildings their own unique character.

Available as a single full colour glass or as an overlay with a plain backing glass.

**Note:**

With most multi-coloured glasses no two sheets are alike. Our illustrations and samples can only hint at the subtleties of movement and play of colour within the actual glass. They are to be used only as a general guide in selecting these glasses.

Each glass will display a similar character, colour and structure, however, there will be individual variations because of the unique production methods of this glass.

Apart from the standard range, there is a wide selection of other special coloured glasses available.

**Glass samples available** to assist in product selection.

**Note:** Surcharge, minimum quantities and lead times may apply.
